SUMMARY

Backend Developer with over 2 years of experience building scalable web applications and secure **RESTful APIs** using **Python** and **Django**. Proven ability to translate complex business needs-such as e-commerce platforms and dynamic pricing engines-into high-performance technical solutions. Skilled in integrating **Data Engineering pipelines** and automated dashboards to extract **actionable business insights**. Committed to **database optimization**, clean architecture, and delivering value-driven software.

TECHNICAL SKILLS

Backend & Frameworks: Python, Django, Django REST Framework (DRF), Flask, RESTful API Architecture.

Databases & Data Engineering: PostgreSQL, MySQL, SQLite, Data Modeling, ETL Pipelines, SQL Query Optimization.

Background Processing & Caching: Celery, Redis.

DevOps & Tools: Git, GitHub, Docker, Linux CLI, Postman.

Frontend Integration: JavaScript, React.js, TailwindCSS, HTML5, CSS3.

WORK EXPERIENCE

Back-end Developer at Faster Auto Spare Parts, Desouk, EGYPT **October 2024 - Present**

- **Engineered** a secure B2B product platform using **Django REST** Framework and **PostgreSQL**, providing a robust and scalable infrastructure for auto spare parts distribution.
- **Developed** a dynamic, role-based pricing engine that instantly serves customized pricing tiers (Wholesaler, Distributor, Regular) upon strict user authentication, successfully protecting sensitive business margins.
- **Designed** RESTful APIs and optimized database queries to deliver rapid data retrieval for individual user dashboards, ensuring seamless integration with the **React** front-end.

PROJECTS

E-Commerce Platform (Khoutwa)

Tech Stack: Python, Django, PostgreSQL, Celery, Redis, REST APIs

- **Engineered** a robust full-stack e-commerce solution for a retail brand, featuring secure user authentication, product catalog management, and a streamlined checkout flow.

- **Architected** an automated background **ETL pipeline** utilizing **Celery** and **Redis** to extract daily transactional data, calculate key performance metrics, and load aggregated results into an optimized reporting database.
- **Designed** an interactive **Business Intelligence (BI) dashboard** that visualizes sales trends and top-performing products, empowering stakeholders with data-driven insights without degrading the live application's performance.

Automated E-commerce Data Pipeline & Orchestration

Tech Stack: Python, Apache Airflow (DAGs), BeautifulSoup, Pandas, Matplotlib, SQL

- **Orchestrated** an automated ETL workflow using **Apache Airflow (DAGs & PythonOperator)** to schedule and execute web scraping tasks via **BeautifulSoup**, extracting real-time e-commerce pricing and rating data.
- **Processed** and enriched the scraped data with synthetic datasets to simulate high-volume environments, performing robust data cleaning and transformation pipelines using **Pandas** and **NumPy**.
- **Architected** the database schema for efficient storage and generated comprehensive visual reports using **Matplotlib**, translating raw data into actionable business insights on pricing trends.

For More Projects 

EDUCATION

B.Sc. in Chemical Engineering

AT ALEXANDRIA UNIVERSITY , FACULTY OF ENGINEERING

October 2023 - Present

Alexandria , Egypt

Cultivating strong analytical and complex problem-solving skills, with a rigorous foundation in quantitative logic and system optimization.

COURSES & CERTIFICATIONS

DATA ENGINEERING : PYTHON, SQL & AIRFLOW |

KIWILYTICS POWERED BY UDEMY. 

February 2026

LANGUAGES

ARABIC - NATIVE

ENGLISH - FLUENT
